

What Do We Know, What Can We Show

Make sure that your page includes each of the following parts.

- I. The name of your subject placed so that it can be clearly seen.
Magnets Stick Together!
Mixtures are Always Splitting Apart
- II. Define your subject or list some of its properties.
 1. Magnets have two poles, north and south.
 2. Mixtures can be separated by the right method.
 3. The parts of a solution are not easy to see.
- I. Give examples.
 1. A compass always points north because it is a magnet.
 2. Rocks and water are a mixture.
 3. Sugar and water are a solution.
- I. Illustrate your examples.
 1. Glue a picture of water onto your paper or cut out your own drawing of water.
 2. Draw a picture of a magnetic field around the earth and glue it into your book.
- I. Write a paragraph about how your subject fits into real life.
 1. A compass is a magnet that helps us find direction.
 2. Ocean water is a solution that some people separate for drinking water.
